

## Partition and Individuation in Germanic & Slavic Stuttgart, 15.06. – 17.06.2022

This is the kick-off workshop of the DFG-funded project *Partition and Individuation in Germanic* (PartInG) which examines phenomena such as (pseudo-) partitivity, measuring, counting, singling-out and their various lexicalization strategies – case marking, prepositions, (indefinite) articles, inflection etc. Close attention is paid to the fine structure of the lower nominal domain, structure-meaning correlations, syncretisms and multifunctionality of the items involved.

The workshop is intended to bring together our cooperation partners, and is co-hosted by Ljudmila Geist's DFG- project on the *Fine Structure of the Noun Phrase*.

We intend to use this opportunity to elaborate on our agenda, discuss research strategies, present preliminary results, and refine our research questions. The program furthermore includes three open/general discussion sessions on **lexical properties of n/N**, **countability**, and **multifunctionality**.

You are cordially invited to attend our workshop!

Should you wish to do so, please drop us a line:
